Prof. J. Lederberg,
Department of Genetics,
University of Wisconsin,
Madison, Wis.

Dear Prof. Lederberg:

I am shipping you today 100 gms. of cellobiose in anticipation of the order from your purchasing department. We cannot undertake to prepare other carbohydrate material but I do have on hand several other sugars and derivatives which I would be glad to let you have if you have use for them. Unfortunately I do not have any d-xylose left. I do have some quantities of both d and l- arabinose. I have a large quantity of l-rhamnose. In addition we have considerable quantities of cellobiose octaacetate, very pure beta-methyl d and l arabinoside, beta methyl d-xyloside, benzal-alpha-methylglucoside, and alpha and beta glucose pentacetates. If you are interested in any of these kindly let me know.

Very truly yours,

S. F. Darling
